Corvane Software, Sales Compensation Plan (AEs)

Q4 FY2026 (Oct 1 to Dec 31, 2026). Supersedes the Q3 plan. Questions to Sales Ops.

Overview

AEs earn commission on credited bookings against a quarterly quota of $300,000, with a quarterly target incentive of $20,000. The base commission rate is target incentive divided by quota. Above quota, accelerators apply to the credit in each band only: 1.5x the base rate from 100% to 125% of quota, and 2x above 125%. Quarterly commission is capped at 3x target incentive.

What gets credited

Closed Won opportunities with a close date in the quarter. Credit is the opportunity Amount in US dollars. Expansions and renewals are credited like new business unless Sales leadership says otherwise. Amendments are credited at their Amount, which may be negative for a downsell.

Deals booked in another currency are converted to US dollars at the weekly rate in effect on the close date (Finance publishes these rates every Monday, see fx_rates.csv).

Splits

A split rep receives the split percentage on the opportunity and the owner receives the rest, unless an owner percentage is entered. Owner and split percentages must add up to 100%. Opportunities whose percentages do not add up to 100% are held (not credited to anyone) until Sales Ops corrects them, and are paid in the quarter they are corrected.

Deal Desk

Discounts above 20% require VP of Sales approval, recorded in the vp_approval field. An opportunity with a discount above 20% and no recorded approval is not commissionable.

New hires

For AEs who start during the quarter, quota and target incentive are prorated by the number of full calendar months employed in the quarter. Rates and bands are then applied to the prorated figures.

SPIFFs

Sales leadership may run short-term incentives (SPIFFs). SPIFFs are announced in the #sales channel, are paid on top of commission, and do not count toward the cap.

General Terms

Commission is calculated after quarter close and paid on January 15, 2027. To receive payment, the AE must be employed by Corvane on the payment date. Corvane may correct errors in crediting at any time. Data exports from the CRM may contain errors; the plan, not the export, governs.

Corvane Software is a fictional company. This plan was written for a SalesOptecs tutorial.
